At the Buzzer, One Week Until Votes Are Counted, Harris 8 Points Atop Trump in Minnesota, Gaining Ground Among Economy-Focused Voters:

SurveyUSA's final pre-election tracking poll for KSTP-TV Minneapolis, KAAL-TV Rochester, and WDIO-TV Duluth shows Democrat Kamala Harris defeating Republican Donald Trump in the North Star State 51% to 43%, with 2% voting for other candidates and 3% undecided.

This is Harris' best showing in the poll, conducted monthly since she entered the race in July; she [previously](#) polled at 50% (July and September) and 48% (August). Trump, who saw a low of 40% in July and a high of 44% last month, was also at 43% in August.

Harris today leads by 16 points among women, while men are evenly divided. Harris leads by 6 points among voters under age 50, by 10 among those age 50+. She is banking early votes: among the 26% of voters who tell SurveyUSA they have already cast their ballots, Harris leads by 20 points; among the 62% who say they are certain to vote, Harris leads by 4. Among those who say they will probably find time to vote, the contest is tied. 95% of Democrats say they are voting for Harris; 90% of Republicans say they are voting for Trump; independents are nearly evenly split, with 46% saying they will vote for Trump, 45% for Harris. Voters with high school educations prefer Trump by a 15-point margin; Harris leads by 7 points among those who have attended some college, by 22 among those who have graduated. Trump leads by 23 points in rural Minnesota, but trails by 13 in the suburbs and by 33 points in urban areas.

The majority of both candidates' voters made up their minds relatively early: 45% of Trump voters said they decided to vote for him last winter or this spring, and another 24% say they made their decision this summer, before the Republican National Convention in July. 71% of Harris voters say they decided they would vote for her as soon as Joe Biden announced he was withdrawing from the race; another 14% decided after the Democratic National Convention in August. Similar and small numbers of voters say they made their decision in September (7% of Trump voters, 6% of Harris voters); in the past few weeks (7% of Trump voters, 4% of Harris voters); or in just the past few days (2% of each candidates' voters).

Trump voters are more likely to say they will vote on Election Day than Harris voters, but perhaps less dramatically so than in 2020: 62% of Trump voters and 54% of Harris voters say they will vote in-person on November 5. 25% of Trump voters and 27% of Harris voters say they will vote early in person; 11% of Trump voters and 18% of Harris voters say they will vote by mail.

Focusing on the issues voters say are most important to them in this year's elections, the economy is unsurprisingly at the top of the list, selected by 35% of likely voters – the highest it has been in [eight SurveyUSA tracking polls](#) dating back to this February. Among those voters, Trump leads by 9 points – down from 14 points last month, and the [narrowest lead he has had](#) on this topic. Abortion is the next-most important issue, selected by 15% of voters; Harris leads by 63 points among them. 14% say immigration is the most important issue, and those voters prefer Donald Trump by a 78-point margin. Other issues poll in single digits.

When voters are asked what issue is second-most important to them, 29% of those who say the economy is most important choose immigration as their 2nd choice; 18% of economy voters say taxes are their next-most important issue; 14% say it's health care; 12% say it's government spending. Among those who say abortion is most important, 22% say the economy is their next issue; 21% each say gun control and health care. Among immigration voters, 46% identify the economy as their 2nd-most important issue; 20% say it's crime; 16% say it's government spending.

DFL Senator Amy Klobuchar remains well ahead in her bid for a 4th term, defeating former NBA player Republican Royce White by 17 points today, 52% to 35%, [essentially unchanged from last month](#). Other DFL candidates also continue to have the edge in generic balloting for Minnesota House seats, where they lead by 5 points, up marginally from 4 points [last month](#).

Fully crosstabbed results follow. Click the Triangle-T icon wherever it appears below to see SurveyUSA's interactive tracking graphs, showing how numbers have changed over time.

About the Research / Filtering: SurveyUSA interviewed 900 adults from the state of Minnesota 10/24/24 through 10/28/24. Of the adults, 801 were identified as being registered to vote; of the registered voters, 728 were determined by SurveyUSA to be likely to vote in the November general election and were asked the substantive questions which follow. This research was conducted online, using nonprobability sample of online adult panelists chosen randomly by Lucid Holdings LLC of New Orleans. The combined pool of survey respondents was weighted to US Census ACS targets for gender, age, race, education, and home ownership, and to recalled 2020 presidential vote.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted “mixed-mode” (or “multi-mode”): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent’s cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent’s phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, “sampling error” is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
